## Introduction

This report will outline the main properties of the game which is going to be developed as a part of Multimedia Programming Module. The game will be called Squirrangle. It is going to be a platform game. The main character, Squirrel, will be collecting pine cones to feed its family on the way to the nest. This game is going to be written in JavaScript language using the Phaser Game Framework.

## Description

### 2.1 Story

The main character Squirrel is living in a nest on a tree with its family on the edge of the forest. Every day it is leaving the nest to gather food for the family. Every time it is a dangerous adventure for a small animal. The Squirrel has to watch out for foxes which might attack it and also other traps.

### 2.2 Magic Circle

The Magic Circle <sup>[1]</sup> of a game is a place where the game takes place. To play a game it means to enter a Magic Circle. The Squirrangle is set in the forest. The Squirrel is surrounded by many trees and bushes. In the Forest live other animals such as Fox who is a threat for the Squirrel.

### 2.3 Player's' role

The user is controlling the Squirrel. The main goal is to collect pine cones and go back to the nest safely. This game is designed for the Explorer and Achiever Player Type. For the Achiever it gives the possibility to master the game and collect as many pine cones as possible. Explorers, on the other hand, are able to score the points to explore next levels and additional features.

### 2.4 Challenges

The user needs to react quickly to the changes in the surrounding. It is important that the Squirrel keeps the distance from the Fox and avoids others traps such as holes in the ground or falling branches.

### 2.5 Actions

The possible actions are running, jumping, hiding and collecting the pine cones. The game must be designed for an optimal experience. It should not be too easy since it leads to boredom. However, a too difficult game might lead to anxiety. The difficulty should increase along with the player's skills.

### 2.6 Target audience

Squirrangle is aimed at children and young adults.

## Game Aesthetics

- Provides entertainment for a short period of time
- Challenges reflex skills and strategic thinking
- Level of difficulty increases along with the skills

## Game Dynamics

- User collects the pine cones to help the Squirrel's family
- To go to next level particular number of pine cones is needed

## Game Mechanics

- Touch screen interface
- Movable or draggable sprites
- No experience is needed to play the game since it uses simple touch interaction

## Genre

Squirrangle is going to be a platform game. It will consist of horizontal scrolling levels.

## Platforms

Squirrangle is going to be a desktop and mobile HTML5 game. It will be possible to play it in a browser on the computer as well as on the mobile phone.
